Report from the Board

A. Report from the Board

This is the Board's report on a compliance audit of Tree Farm Licence 42 (TFL 42) held by Tanizul Timber Ltd. (Tanizul). TFL 42 is located north and east of Stuart Lake, south of Trembleur Lake and west of the Tachie River, in the Fort St. James Forest District.

The Report from the Auditor (Part B) provides further details on the location of TFL 42 (see attached map), the scope of the audit, and the audit findings. The Report from the Auditor is based on the audit procedures described in Part C¹.

The audit examined Tanizul's timber harvesting, road practices, and related operational plans, for the period of June 1, 1999 to June 18, 2000. The audit assessed compliance with the *Forest Practices Code of British Columbia Act* and related regulations (the Code).

Conclusions

Tanizul's timber harvesting and road construction, maintenance and deactivation activities complied with Code requirements in all significant respects. The identified instances of non-compliance were relatively few in number and minor in nature; therefore, they were not considered worthy of reporting.

W.N. (Bill) Cafferata, RPF
Chair
November, 2000

¹ Part C of this document provides background information on the Board's audit program and the process followed by the Board in preparing its report.

Report from the Auditor

B. Report from the Auditor

1. Introduction

As part of the Forest Practices Board's 2000 compliance audit program, Tree Farm Licence 42 (TFL 42) was selected for audit from the population of major forest licences within the Prince George Forest Region. The licence, held by Tanizul Timber Ltd., was selected randomly and not on the basis of location or level of performance.

TFL 42 covers an area of 49,394 hectares, and is situated north and east of Stuart Lake, south of Trembleur Lake and west of the Tachie River, in the Fort St. James Forest District (see attached map). Tanizul, owned and controlled by the Tl'azt'en Nation, obtained the TFL in 1982. The Tl'azt'en Nation administers the activities in the TFL through an elected Board of Directors. The TFL is managed by Tanizul employees based in Tachie, with assistance in operational planning from Canadian Forest Products Ltd. (Canfor) in Fort St. James.

TFL 42 has an allowable annual cut of 120,000 cubic metres, of which 5,888 cubic metres are allocated to the Small Business Forest Enterprise Program (SBFEP).

2. Audit Scope

The audit examined Tanizul's planning and field activities related to timber harvesting; road construction, maintenance and deactivation; and associated aspects of operational planning (including forest development plans¹ and silviculture prescriptions²). These activities were assessed for compliance with the *Forest Practices Code of British Columbia Act* and related regulations (the Code). The audit did not examine SBFEP activities in the TFL.

The period for which activities were examined was June 1, 1999, to June 18, 2000.

The activities carried out during the audit period, and therefore subject to audit, were:

- harvesting of six cutblocks
- preparing and obtaining approval of silviculture prescriptions for ten cutblocks, of which three were harvested in the audit period
- construction of six road sections totaling 13.5 kilometres
- planning and layout of three road sections totaling 4.5 kilometres
- maintenance of approximately 164 kilometres of road, involving activities such as road surfacing and cleaning culverts and ditches
- maintenance of ten bridges

- deactivation of 19 road sections totaling 27.5 kilometres

Section 3 describes the audit of these activities and the results. The Board's audit reference manual, *Reference Manual - Compliance Audits, Version 4.1, May 2000*, sets out the standards and procedures that were used for this audit.

3. Audit Findings

Planning and practices examined

The audit work on selected roads and cutblocks included ground-based procedures and assessments from the air using helicopters. Because of the small population sizes, we audited all or most of the items in each population. The audit examined:

- harvesting of six cutblocks
- four cutblocks where harvesting had not yet commenced but the silviculture prescriptions were prepared in the audit period
- construction of six road sections totaling 13.5 kilometres
- planning and layout of two road sections totaling three kilometres
- maintenance of approximately 117 kilometres of road
- maintenance of ten bridges
- deactivation of 13 road sections totaling 14.5 kilometres

Findings

The audit found that Tanizul's planning and field activities were in compliance, in all significant respects, with Code requirements for timber harvesting activities and road construction, maintenance and deactivation activities. The instances of non-compliance were relatively few in number and minor in nature.

4. Audit Opinion

In my opinion, the timber harvesting and road construction, maintenance, and deactivation activities carried out by Tanizul Timber Ltd. in TFL 42 from June 1, 1999, to June 18, 2000, were in compliance, in all significant respects, with the requirements of the Code as of June 2000.

In reference to compliance, the term "in all significant respects" recognizes that there may be minor instances of non-compliance that either may not be detected by the audit, or that are detected but not considered worthy of inclusion in the audit report.

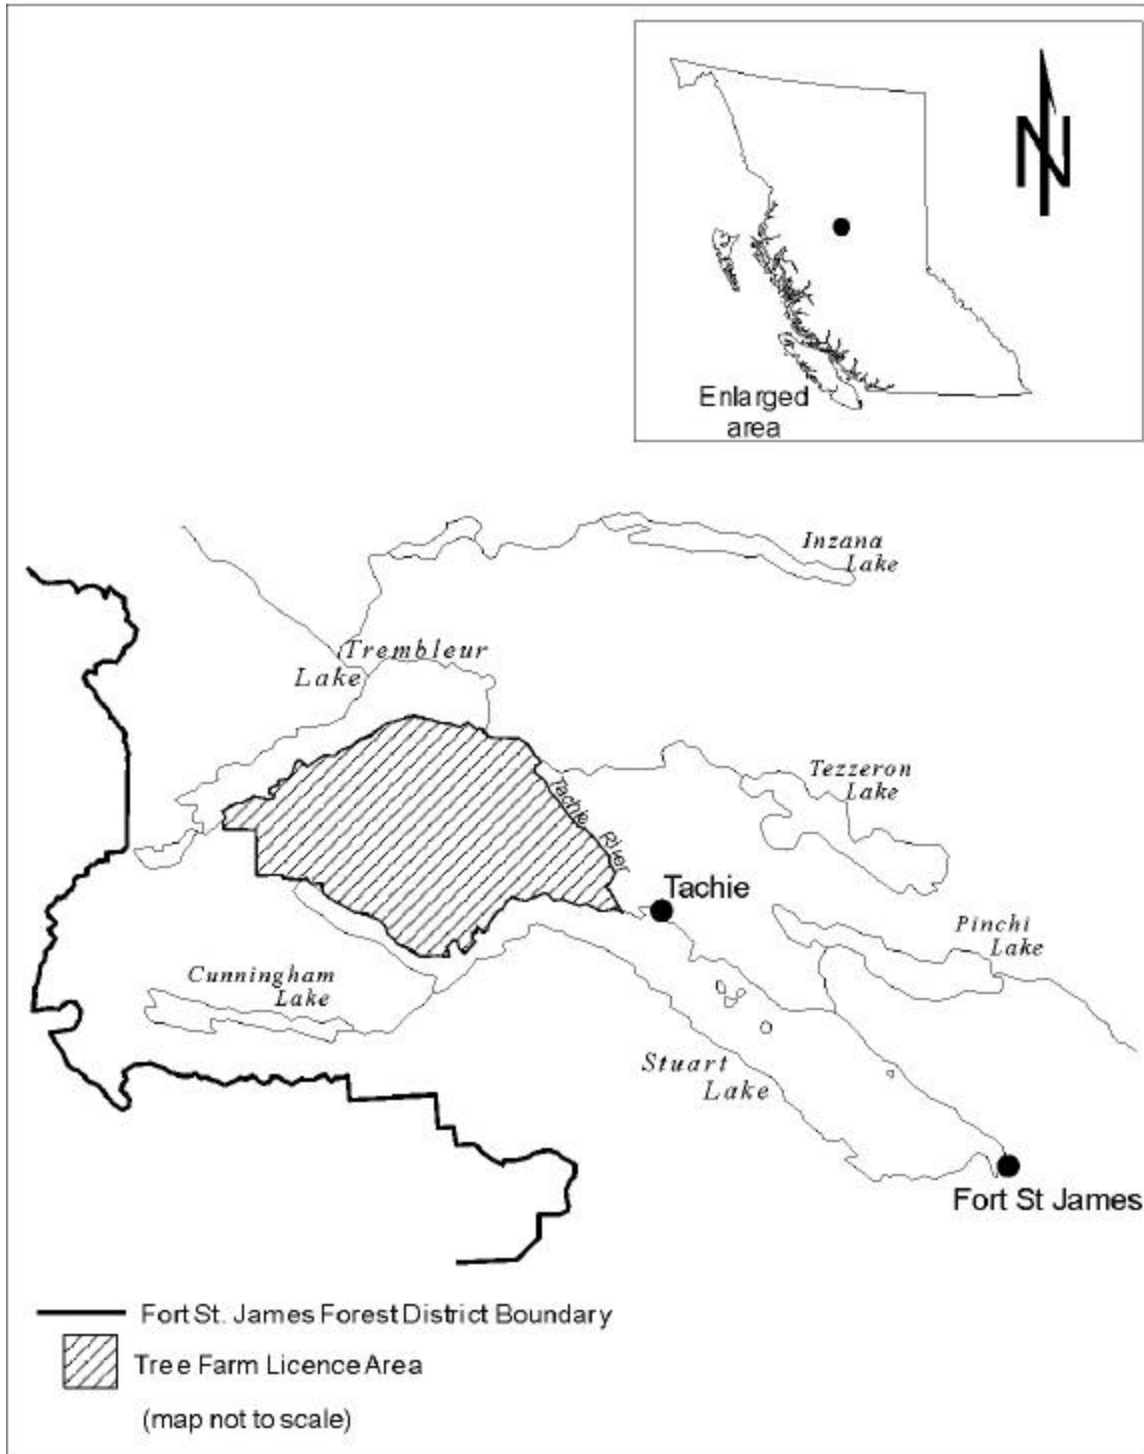

Sections 2 and 3 of this report from the auditor describe the basis of the audit work performed in reaching this opinion. The audit was conducted in accordance with the auditing standards of the Forest Practices Board. Such an audit includes examining sufficient road and timber harvesting practices to support an overall evaluation of compliance with the Code.

A handwritten signature in black ink, appearing to read "Jon Davies". The signature is written in a cursive, flowing style.

Audit of Tanizul Timber Ltd. Tree Farm Licence 42

Endnotes

1. A forest development plan is an operational plan that provides the public and government agencies with information about the location and scheduling of proposed roads and cutblocks for harvesting timber over a period of at least five years. The plan must specify measures that will be carried out to protect forest resources (including water, fisheries and other forest resources). It must also illustrate and describe how objectives and strategies established in higher level plans, where they have been prepared, will be carried out. Site specific plans are required to be consistent with the forest development plan.
2. A silviculture prescription is a site-specific operational plan that describes the forest management objectives for an area to be harvested (a cutblock). The silviculture prescriptions examined in the audit are required to describe the management activities proposed to maintain the inherent productivity of the site, accommodate all resource values including biological diversity, and produce a free growing stand capable of meeting stated management objectives. Silviculture prescriptions must be consistent with forest development plans that encompass the area to which the prescription applies.

**Forest Practices Board Compliance Audit
Process**

C. Forest Practices Board Compliance Audit Process

Background

The Forest Practices Board conducts audits of government's and agreement holders' compliance with the *Forest Practices Code of British Columbia Act* and regulations (the Code). The Board is given the authority to conduct these periodic independent audits by section 176 of the Act. Compliance audits examine forest planning and practices to determine whether or not they meet Code requirements.

The Board undertakes both "limited scope" and "full scope" compliance audits. A limited scope audit involves the examination of selected forest practices (e.g., roads, or timber harvesting, or silviculture) and the related operational planning activities. A full scope audit examines all operational planning activities and forest practices.

The Board determines how many audits it will conduct in a year, and what type of audits (limited or full scope), based on budget and other considerations. The Board audits agreement holders who have forest licences or other tenures under the *Forest Act* or the *Range Act*. The Board also audits government's Small Business Forest Enterprise Program (SBFEP) which is administered by Ministry of Forests district offices. Selection of agreement holders and district SBFEPs for audit is done randomly, using a computer program, to ensure a fair, unbiased selection of auditees.

Audit Standards

Audits by the Forest Practices Board are conducted in accordance with the auditing standards developed by the Board. These standards are consistent with generally accepted auditing standards.

The audits determine compliance with the Code based on criteria derived from the *Forest Practices Code of British Columbia Act* and its related regulations. Audit criteria are established for the evaluation or measurement of each practice required by the Code. The criteria reflect judgments about the level of performance that constitutes compliance with each requirement.

The standards and procedures for compliance audits are described in the Board's *Compliance Audit Reference Manual*.

Audit Process

Conducting the Audit

Once the Board selects an audit and decides on the scope of the audit (limited scope or full scope), the staff and resources required to conduct the audit and the period covered by the

audit are determined. Board staff also meet with the party being audited to discuss the logistics of the audit before commencing the work.

All the activities carried out during the period subject to audit are identified. This includes activities such as the sites harvested or replanted and road sections built or deactivated during the audit period. The items that make up each forest activity are referred to as a "population." For example, all sites harvested form the "timber harvesting population." All road sections constructed form the "road construction population." The populations are then sub-divided based on factors such as the characteristics of the sites and the potential severity of the consequences of non-compliance on the sites.

The most efficient means of obtaining information to conclude whether there is compliance with the Code is chosen for each population. Because of limited resources, sampling is usually relied upon to obtain audit evidence, rather than inspecting all activities.

Individual sites and forest practices within each population have different characteristics, such as the type of terrain or type of yarding. Each population is divided into distinct sub-populations on the basis of common characteristics (e.g., steep ground vs. flat ground). A separate sample is selected for each population (e.g., the cutblocks selected for auditing timber harvesting). Within each population, more audit effort (i.e., more audit sampling) is allocated to the sub-population where the risk of non-compliance is greater.

Audit work in the field includes assessments from helicopters and intensive ground procedures such as the measurement of specific features like road width. The audit teams generally spend two to three weeks in the field.

Evaluating the Results

The Board recognizes that compliance with the many requirements of the Code is more a matter of degree than absolute adherence. Determining compliance requires the exercise of professional judgment within the direction provided by the Board.

Auditors collect, analyze, interpret and document information to support the audit results. The audit team, composed of professionals and technical experts, first determines whether forest practices are in compliance with Code requirements. For those practices considered to not be in compliance, the audit team then evaluates the degree to which the practices are judged not in compliance. The significance of the non-compliance is determined based on a number of criteria including the magnitude of the event, the frequency of its occurrence, and the severity of the consequences.

As part of the assessment process, auditors categorize their findings into the following levels of compliance:

Compliance – where the auditor finds that practices meet Code requirements.

Not significant non-compliance – where the auditor, upon reaching a non-compliance conclusion, determines that a non-compliance event, or the accumulation and consequences of a number of non-compliance events, is not significant and is not considered worthy of reporting.

Significant non-compliance – where the auditor determines that the event or condition, or the accumulation and consequences of a number of non-compliance events or conditions, is significant and is considered worthy of reporting.

Significant breach – where the auditor finds that significant harm has occurred or is beginning to occur to persons or the environment as a result of the non-compliance. A significant breach can also result from the cumulative effect of a number of non-compliance events or conditions.

Identification of a possible significant breach requires the auditor to conduct tests to confirm whether or not there has been a breach. If it is determined that a significant breach has occurred, the auditor is required by the *Forest Practices Board Regulation* to immediately advise the Board, the party being audited, and the Ministers of Forests, Energy & Mines, and Environment, Lands & Parks.

Reporting

Based on the above evaluation, the auditor then prepares the “Report from the Auditor” for submission to the Board. The party being audited is given a draft of the report before it is submitted to the Board so that the party is fully aware of the findings. The party is also kept fully informed of the audit findings throughout the process, and is given opportunities to provide additional relevant information and to ensure the auditor has complete and correct information.

Once the auditor submits the report, the Board reviews it and determines whether any party or person is potentially adversely affected by the audit findings. If so, the party or person must be given an opportunity to make representations before the Board decides the matter and issues a final report to the public and government. The representations allow potentially adversely affected parties to present their views to the Board.

At the discretion of the Board, representations may be written or oral. The Board will generally offer written representations to potentially adversely affected parties, unless the circumstances strongly support the need for an oral hearing.

The Board then reviews both the report from the auditor and the representations before preparing its final report, which includes the Board’s conclusions and may also include recommendations, if appropriate.

If the Board’s conclusions or recommendations result in newly adversely affected parties or persons, additional representations would be required.

Once the representations have been completed, the report is finalized and released: first to the auditee and then to the public and government.
